

LAKE VILLAGE WALKING PATHS

Lake Village is home to a number of trees providing a canopy of branches and leaves covering lush hills and slopes. Our Members enjoy taking relaxing walks along a secluded trail that meanders through green foliage and tall deciduous trees. The Wildlife Habitat Committee is committed to enhancing this trail with wildlife identification markers, rest benches, and bird feeders all in support of our members appreciation and understanding of our Wildlife Habitat.

Lake Village’s two lakes are home to a myriad of ducks, geese, pelicans, and coots; migratory birds visit throughout the year. The lake is a habitat for fish, salamanders, pollywogs, and plant life. We must remember that our Wildlife Habitat is a precious resource for so many species. For a bird, fish or turtle, it’s easy to mistake a small piece of plastic for food—single-use cups, styrofoam containers (which never fully degrades) and other plastic “stuff.” Do your part to not pollute our wildlife habitat. *Enjoy your walk.*
